

Employee Time & Management Portal

Comprehensive End-User Manual & Administration Guide

1. Product Overview

The Leoxur Solutions Limited Employee Time & Management Portal is an all-in-one centralized digital ecosystem designed to streamline day-to-day organizational workflows. Combining attendance monitoring, flexible shift scheduling, internal communication utilities, and IT help-desk services into a single unified workspace, the platform improves transparency and productivity across teams.

Key Core Benefits:

- **Simplified Self-Service Tracking:** Employees can effortlessly record check-in and check-out entries via a shared tablet or terminal kiosk using a fast, high-security 4-digit PIN system.
- **Dynamic Shift Administration:** Managers gain access to live shift roster tables, instant daily stats visual summaries, and automated calculations for shifts spanning different operational hours.
- **Integrated IT Ticketing:** An enterprise-grade customer support platform links portal users to dedicated IT support engineers with automated service-level agreement (SLA) status windows.
- **Unified Communications Suite:** Internal emails, department chat rooms, secure direct messages, individual note-taking, and visible Kanban task tracking cards reduce reliance on fragmented third-party apps.

2. System Requirements & Prerequisites

The platform operates as a modern web application accessible across common office devices. End-users do not need to install local software packages, compilers, or database frameworks.

For Employees and Staff (Web Client Access):

- **Supported Browsers:** Google Chrome, Mozilla Firefox, Microsoft Edge, or Apple Safari (Latest stable versions recommended).
- **Hardware Terminals:** Any desktop computer, laptop, or shared wall-mounted tablet display connected to the corporate intranet.
- **Network Requirements:** Uninterrupted network connectivity to the hosted company domain or server IP.

System Time & Session Standards:

- **Default Timezone:** Configured natively to Asia/Kolkata (IST — UTC+5:30) for highly synchronized shift milestones.
- **Automatic Protection Expiry:** Inactive portal sessions clear and lock automatically after 30 minutes of user inactivity, or immediately upon closing the web browser.

3. Getting Started & Installation Guide

For standard end-users, access is granted instantly by navigating to the designated company web portal link provided by your organization's IT department.

Note for Portal Administrators: If deploying a brand new instance from scratch onto cloud infrastructure (such as AWS EC2, Azure VM, or GCP Compute Engine), use the automated server deployment terminal command: `bash deploy.sh`. The system will prompt you to enter your organization name, apply database updates, and guide you through creating the master administrator manager profile.

First-Time Access Checklist:

1. Navigate to the home URL (e.g., `http://your-company-portal.com/`).
2. Review the **Global Shift Ticker Bar** visible at the top margin of the landing page, displaying live operational hours and current shift updates.
3. **Employees:** Obtain your unique 4-digit security PIN from your primary department supervisor to interact with the interactive kiosk.
4. **Managers and IT Engineers:** Use the main login portal link to securely sign in using your designated username or email identity.

4. Feature Guide & Core Functionalities

4.1 Employee Time & Expense Kiosk

Accessed via the `/grid/` page, this interface functions as a shared digital check-in station.

- **Navigating Departments:** Tap through the dynamic top tabs to view employee cards categorized by active departments (e.g., Engineering, HR, Sales).
- **Recording a Check-In:** Tap your personal employee profile card. Type your unique 4-digit PIN into the visual keypad overlay. Choose your active **Work Mode** from the selector: 🏢 Office, 🏠 Remote, or 🚗 Field. Confirm to log your entry time.
- **Late Arrival Rule:** The portal automatically stamps arrivals as **Late** 🕒 if the check-in time occurs more than **15 minutes** past the scheduled shift start.
- **Recording a Check-Out:** Tap your active profile card, confirm your 4-digit PIN entry, and select the checkout button. The terminal will save your log and immediately output your total active hours worked.

Shift Milestone Schedule Matrix:

Shift Type	Standard Operational Hours	Late Buffer Expiry Threshold
 Morning Shift	06:00 AM – 02:00 PM	06:15 AM
 Afternoon Shift	02:00 PM – 10:00 PM	02:15 PM
 Night Shift	10:00 PM – 06:00 AM	10:15 PM

4.2 Manager Command Center

Authorized supervisors can manage operations by accessing the main dashboard panel.

- **Live Attendance Summaries:** Review visual analytics bars mapping total active staff counts, checked-in individuals, late tallies, and absent profiles.
- **Interactive Shift Roster Scheduler:** Browse dates using the calendar picker. Modify an employee's assignment by picking a target shift from the grid dropdown. To clear an entry entirely, pick -- *Remove Shift* --.
- **Exporting Data Reports:** Click the **Export CSV** button to instantly download a spreadsheet detailing historical employee IDs, full names, active departments, rosters, modes, exact check timings, and total hours worked.
- **Employee Record Control:** Add new profiles, modify active assignments, or perform safe **soft-deletes** which hide an employee profile from active lists without erasing historical logs.

4.3 IT Support Help-Desk

A dual-sided client and engineering tracking workspace ensuring continuous SLA fulfillment.

- **Raising Support Tickets:** Authorized users can submit incidents by specifying a caller name, subject, clear description, and priority rating. The platform auto-assigns numbers following an incremental format (e.g., TKT100001).
- **Client Communication Loop:** Employees view real-time state badges and text updates via the ticket tracking page. They can post immediate message replies directly into the activity feed.
- **IT Engineering Console:** Assigned IT engineers log into a dedicated backend workspace to update operational statuses (New, In Progress, On Hold, Resolved, Closed), document internal-only tech logs, or assign tickets to distinct resolution teams.

Help-Desk SLA Deadlines:

Incident Priority	SLA Resolution Window	Portal Tracking Color Status
Critical	1 Hour Deadline	 Breached or  Warning if near limit
High	4 Hour Deadline	 Active Tracking
Moderate	8 Hour Deadline	 Active Tracking
Low	24 Hour Deadline	 Active Tracking

4.4 Leoxur Mails & Chat Communication Suite

A native communications suite (/leoxur-comm/) featuring a responsive, clean sidebar layout.

- **Internal Email Interface:** Compose, address, and dispatch secure memos to any internal system profile. Received items support simple inline message threading replies.
- **Team Chat Rooms & Messaging:** Join permanent company-wide discussion channels (#general, #support, #managers, #announcements) or open secure direct conversations. Incoming messages trigger automated chime sounds built directly inside your browser.
- **Collaborative Leo Notes:** Draft text notes with immediate local auto-save features. Adjust privacy settings via the toolbar menu to toggle between  *Private Notes* (visible only to you) or  *Collaborative Notes* (shared workspace view).
- **Kanban Task Board:** Create dynamic goal tracking cards containing detailed assignment summaries, assigned personnel, priority parameters, and status column fields (Backlog, In Progress, In Review, Done, Archived).

5. Common Configuration Settings

System Administrators and Advanced Staff can fine-tune portal operations from the built-in Developer page.

- **Kiosk Interface Element Reordering:** Adjust your check-in terminal display layout using drag-and-drop mechanics. Instantly toggle visibility or reorder the Branding Header, Department Tabs, Stats Banners, and Employee Grids.
- **Natural Language AI Control commands:** Type direct text commands to control formatting configurations quickly (e.g., typing *"hide the stats banner"* or *"move student grid to top"* executes immediate layout adjustments).
- **Ticketing Permission Control:** Grant or revoke support privileges via a clean table array, determining which specific system accounts are permitted to generate internal IT help-desk tickets.

6. Troubleshooting & FAQs

Q: An employee checked in but their profile badge shows "Late 🕒". Can this be changed manually?

A: The system calculates tardiness automatically using the 15-minute buffer threshold. To correct exceptions, a manager can edit the entry from the Django Administrative control suite or adjust the roster hours for that date.

Q: Why can't a specific manager access the IT Support ticket generation tab?

A: The user account requires explicit ticket permission. A superuser must access the Developer Panel (/manager/developer/) and toggle the permission switch next to that user's name to green.

Q: We accidentally removed an employee profile. Is the historical attendance data completely lost?

A: No. The portal utilizes safe soft-deletes. Setting a profile to inactive keeps all archived attendance sheets, historical shift records, and time logs perfectly intact inside the master database file.

Q: My text notes in Leo Notes vanished when I logged into another device profile. How do I fix this?

A: Text files configured as  *Private* save safely into your local browser storage. To access notes seamlessly from any workspace terminal across the office network, make sure to change the visibility dropdown selector to  *Collaborative*.
